Tools	GitLab, BitBucket, Figma, Jira+Confluence
Project	Scrum, Agile, Kanban, Waterfall, code review

Android Developer – MTS Digital

2021 – now

2+ years of experience as Android developer in Fixed & Convergent Services unit of My MTS project. It's a big multi-module ecosystem multi-platform project. I develop client features, create unit tests, and do the bug-fixing in my primary role as well as work on the app architecture improvements as extra welcomed by the team. We mainly use Kotlin, Compose, MVI, Coroutines/RxJava2, Dagger2, and Mockito for unit tests. In legacy modules, I sometimes work with MVVM/MVP/XML/Java. I collaborate in my team with analysts, QA, the product owner, the designer, and peer Android/iOS developers. The delivery tools are GitLab, Figma, Jira+Confluence and we work by Scrum

2014 – 2021 **Android Developer – private business owner**

Designed, developed, and delivered a number of personal IT projects, mainly for Android.

Showcase – ReportMid – E-Sports community app for personal performance analysis – Android, Kotlin, MVVM, RxJava2, Retrofit, Navigation, Binding, Dagger2, Room, Material, 3rd-party integration (RIOT API).

Other projects: Sprocket's Purchase List – family shopping list (Android, Java+Kotlin, ads); Push Button! – puzzle game (Android, Java, in-app billing, multimedia); PurchaseList for Web – shopping list prototype (J2EE, JSF, CDI, JPA, Converters, Derby); TimeTracker – time tracking tool (J2SE, FX, Oracle/Derby); Synapse – experimental AI platform (Java, ANTLR4, Protobufs); CameraMan – IoT camera (Raspberry PI + Arduino, Java, FX, C++)

Other Experience

2010 – 2021
